# Linux Development

Custom Embedded Linux & Android development for scalable, secure, and OTA-ready systems.

We specialize in custom Embedded Linux and Android solutions, offering end-to-end development from kernel and driver customization to middleware, GUI applications, and IoT/cloud integration.

We deliver secure, scalable, and OTA-ready systems tailored for industrial, commercial, and connected devices.

## Benefits

- ✔ Customized Solutions
- ✔ Faster Time-to-Market
- ✔ Reliable & Secure Systems
- ✔ End-to-End Support
- ✔ Scalable & Future-Ready

*"From kernel tweaks to cloud integration, we deliver scalable, OTA-ready systems with tailored OS, drivers, and applications for commercial and industrial needs"*

## Our Services

### Embedded Linux & OS Development

- Custom Linux/Android OS
- Kernel and bootloader customization
- Cross-platform porting and optimization

### Device Drivers & Middleware

- Audio/video, and sensor drivers
- Middleware integration for efficient system operation
- Support for IoT peripherals and protocols

### GUI & Application Development

- Qt, TouchGFX, and Android-based applications
- Real-time and user-friendly interfaces
- Cloud-connected dashboards

### Maintenance & Support

- OTA updates and performance tuning
- Security patches and system monitoring
